

Noah – Reflection – CSS – Project #2

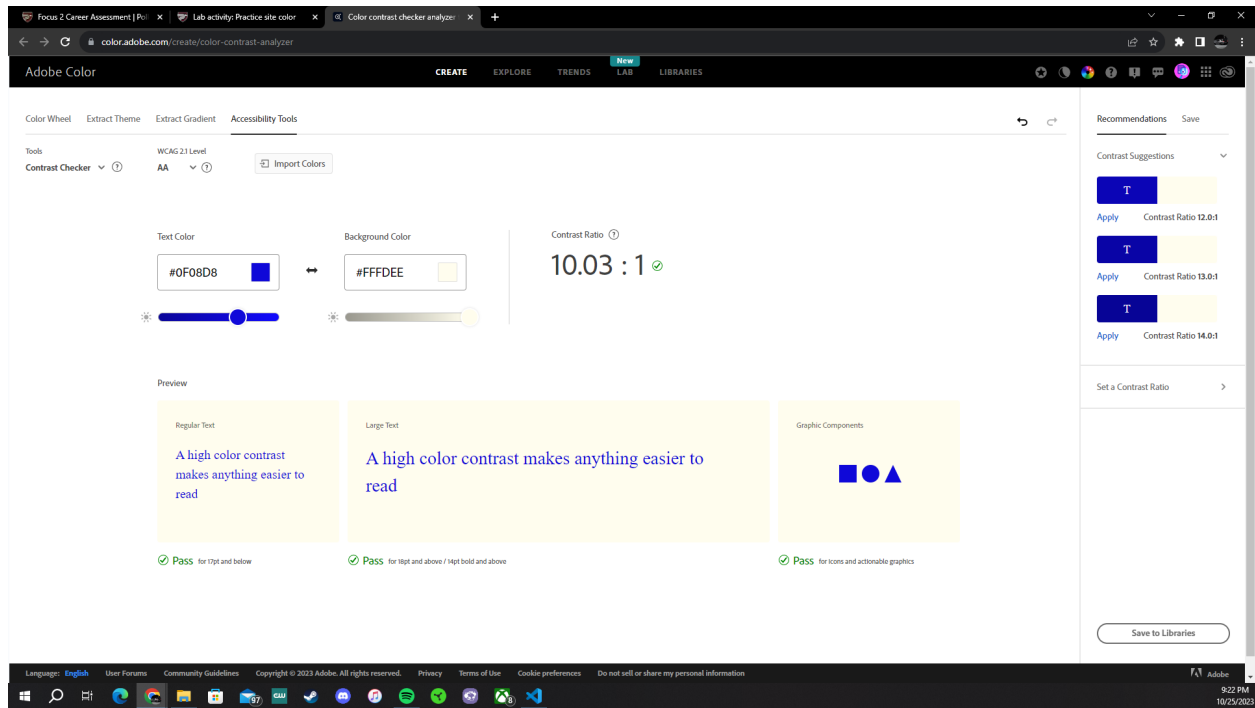

Instructions: The goal of your reflection document is to 1) explain your design choices, and 2) explain the techniques you used in the program. Be sure to use proper terminology (for example elements, opening tag, closing tag, etc.) in your reflection. Demonstrate you understand the design concepts and the software you used to create your site. Make sure you proofread your reflection, so it is free of errors.

Explain your use of HTML and how your site conforms to HTML standards and accessibility standards.

I wanted the site to be easy to navigate.

CSS style	Where it is	Explanation
format text (headers and body text)	All pages	I made the headers blue so they'd stand out more than the rest.
consistent navigation and design across pages (so we can tell it is all the same website)	All pages	I have the logo and the icons for the other sites in the nav to show the logo and have quick access to those sites
background and colors	All the pages	I chose a beige color to contrast with the blues and grays I have
work with margins, padding, and header and footers to achieve a nice consistent layout on your site	Most of the pages	I have margins and padding in the grids to have accurate spacing.
include a flex box nav bar that is well designed (paying close attention to the flow and the wrap)	At the top of all pages	I wanted the nav bar to include the icons for the sites like instagram,facebook,and paypal.
include a grid design in your site that drives your layout - (this will be used more later on as well as you move onto responsive designs, so set it up well on this project)	Index page	I chose to have a grid setup like having information and a picture on the top and bottom and in the middle having just the video.
Include any items above the minimum	Calendar page and contact page	I have a calendar with a selected date on it and an actual contact form.

Explain your layout and visuals and why it is professional. Two things you are required to explain here include: 1) your color palette and how it conforms to web standards (show screenshot of contrast report), and 2) grid and flexbox - and how you utilized each in your layout of your project.

The colors i used were Blue #0F08D8, Beige #FFFDEE, and Gray #a6a8ab. I used flexbox with the gallery and nav, I used grids to separate information on the index and about page.

If you went beyond the minimum requirements for this assignment, please explain here how you did so. I had to look up online how to make the calendar and contact form.

Show a screenshot of your site validation for your pages (minimum of 4 pages). *
